Today's presentation

- Background on the Enhanced Networked Monographs project
- Topic maps introduction
- Topic Curation Toolkit software
- Topic map publishing
- Topic curation

Enhanced Networked Monographs (ENM)

- Funded by The Andrew. W. Mellon Foundation
- Free web access to ~110 selected EPUBs
 - NYU Press
 - University of Minnesota Press
 - University of Michigan Press

Enhanced Networked Monographs (ENM)

- 1. Platform for reading
- 2. Semantic text-manipulation tool (Topic Curation Toolkit)
- 3. Open-source tools and workflows
- 4. List of requirements

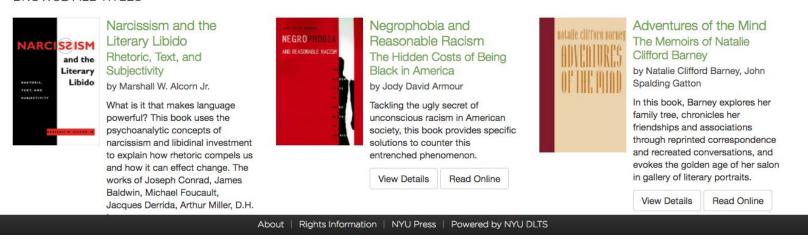

openaccessbooks.nyupress.org

NYU Press is pleased to offer these books in an open access platform for reading on desktop and mobile devices. We will continue to contribute new titles each year. Read more about the project...

Topic Maps at a glance

Or, how to represent complex knowledge given the limitations of computer systems.

Formats

Computers need predefined formats to access information

Names

Computers need names to locate things.

Hierarchies

Navigation is done either through search or by navigating taxonomies.

"Topic" "Maps"

Topic Maps is an information architecture that provides access to meaning independently of its sources. (ISO/IEC 13250)

Topics

Unit of meaning occupying a location in an abstract space.

Any subject of conversation is a topic.

Maps

Graph providing the connection between the topics

Topic Names

Topics can have one name, multiple names, and no name.

Multiple names

Synonyms, multiple languages, variant names for different audiences (technical vs. common, etc.)

No name

- Cross-references, web links are links between 2 occurrences of the same topic.
- One name for multiple topics
- Names can be topics
 - The naming process itself can come under discussion.

The Topic Curation Toolkit (TCT)

Features

- Ingest Ebooks
- Manage Topic Map
- Export to Reading Interface

Technology

- Backend: Django / PostgresQL
- Frontend: AngularJS

TCT Ingest

Every entry and subentry in the indexes become a topic.

Automatic relationships created:

- Entries/Subentries
- See / See also
- Containment
- 3 word rule

TCT Editorial Interface

Enables navigation between topics and pages in the books

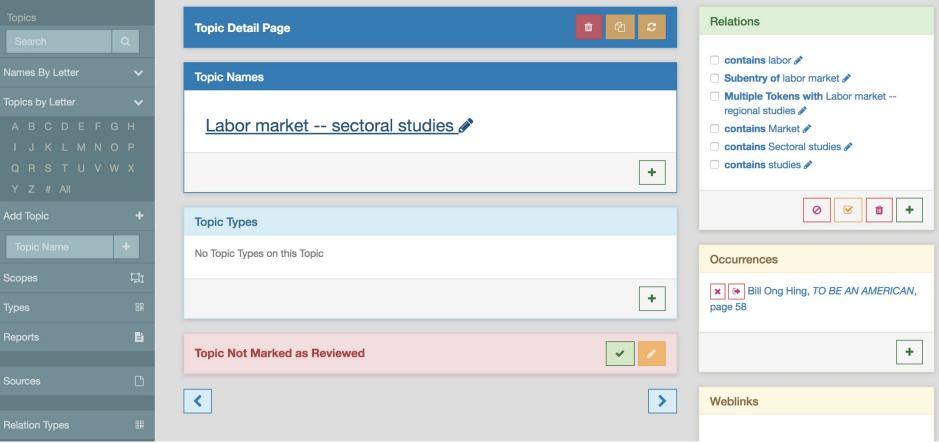

Look up topics with a master index and topic search

Editing interface to add, delete or modify:

Names, types, occurrences, sources, relations, weblinks

The Employment of English, page 38

Content

that they are in some sense "employees." And if administrators and faculty at Yale or elsewhere want to claim that their graduate students' wages are not "wages" because their teaching (which is not strictly "teaching") is merely part of their professional training as apprentice professors, then it makes sense to call the bluff: take graduate students out of the classrooms in which they work as graders, assistants, and instructors; maintain their stipend support at its current levels; and give them professional development and training that does not involve the direct supervision of undergraduates. Then we'll see how long Yale University can survive without the labor (which is not strictly "labor") of its graduate student teaching assistants. At the time, I thought my support for graduate student unions—in a speech delivered to, among other people, unionized graduate students—amounted to endorsing candidates after they'd won their elections. To my surprise, however, I learned later that the graduate students were very pleased with my speech, and that some even considered it "courageous." It seems that I had denounced as ridiculous Yale administrators' claims that graduate students were not employees in front of a number of Kansas administrators who had claimed that graduate students were not employees. (I told the students I had had no idea that my audience included actual had faith negotiators, and that my "courage" in

Topic curation workflows

Topic Curation Toolkit automatically:

- merges topics
- creates relations between topics

Human editor manually:

- fixes processing errors
- removes certain relations
- merges synonyms and splitting up homonyms
- adds relations tool did not find
- adding new data, sometimes from external sources like Wikidata

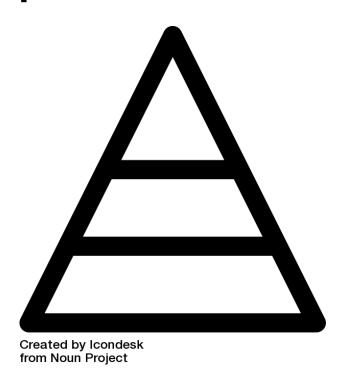

Topic curation workflows 15,800 topics checked ~45,000 topics from 88 indexes 12,647 marked as unchanged Open book's index and see what Scan list, checking original term was to see if name about to click on 3,151 edited can be merged with nearby Add obvious oes it look wein names relations or leave with none Fix name or add additional name Check Log into tool; Click Click on name; relations on either a letter or check TOPIC context the name obscure All topics in "Topics Check some by Letter": sort by occurrences to Not sure alphabetical, # of see what term relations, or # of means Check off topic occurrences egin process with Leave it next name in topic Add any aditional semantics (fixing name, adding name look wei occurrences to see which should go with detached name; detach occurrences and again with weird relationships Check occurrences to double check what name means; Glance at relations those names

should be merged

Topic curation workflows

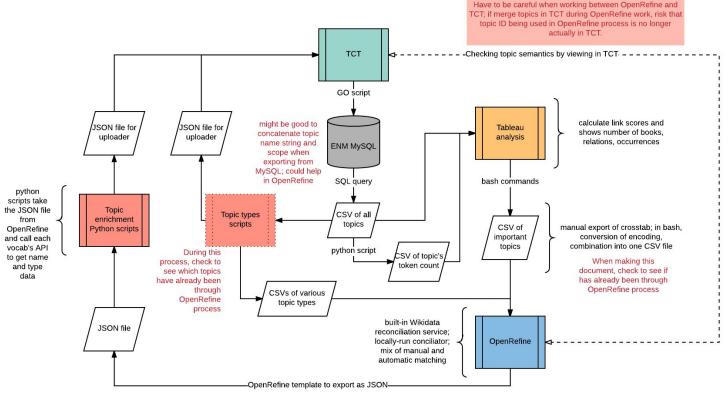

Values

Principles

Practices

- adding and removing relations
- splitting, deleting, and merging topics
- adding scopes to names
- dealing with alternate names
- curating subentry relationships

Topic curation workflows

Subject metadata and topics

Subject headings

Find an item with a known subject

Find what a library has on a subject

Back-of-book indexes

Quick and easy access to information

Sometimes used to give an overview of the text

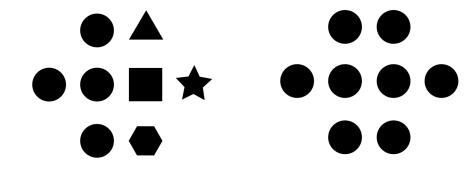

item / place in text collection / item

Nonscalability

"Against Cleaning" (Rawson & Muñoz, Curating Menus)

Nonscalability theory (Anna Tsing)

Created by d3ermi Good from Noun Project

Created by d3εrmi Good from Noun Project

Specificity, exhaustivity, and granularity

- LCSH is specific but NOT exhaustive (apply 3-5 headings)
- Back-of-book-indexes are specific AND exhaustive
- Implicit meaning
 - core group in networks and social worlds -- pair or small-group bonds via proximity in neighborhood
 - The Class: Living and Learning in the Digital Age: 1,263 topics

Topics as subject headings?

Conclusion
