

INTRODUCING THE NETWORKER

KNOWLEDGE GRAPHS UNMEDIATED

MICHEL BIEZUNSKI, INFOLOOM
KNOWLEDGE GRAPH MEETUP,
COLUMBIA UNIVERSITY, NEW YORK
NOVEMBER 11, 2019

WHO I AM

- Michel Biezunski
- CEO, Founder of Infoloom Inc., a New York based company.
- Creator of the Topic Maps Standard (ISO/IEC 13250), considered a precursor to Knowledge Graphs.
- Transitioned from XML to Web Development (Full-stack)
- Designed the "Networker"
- Background: history/philosophy of physics.

CONTENTS

- Notion of Knowledge Graph Template
- The Networker Platform:
 - Data Connections: Spreadsheet to Knowledge Graph
 - Data Curation

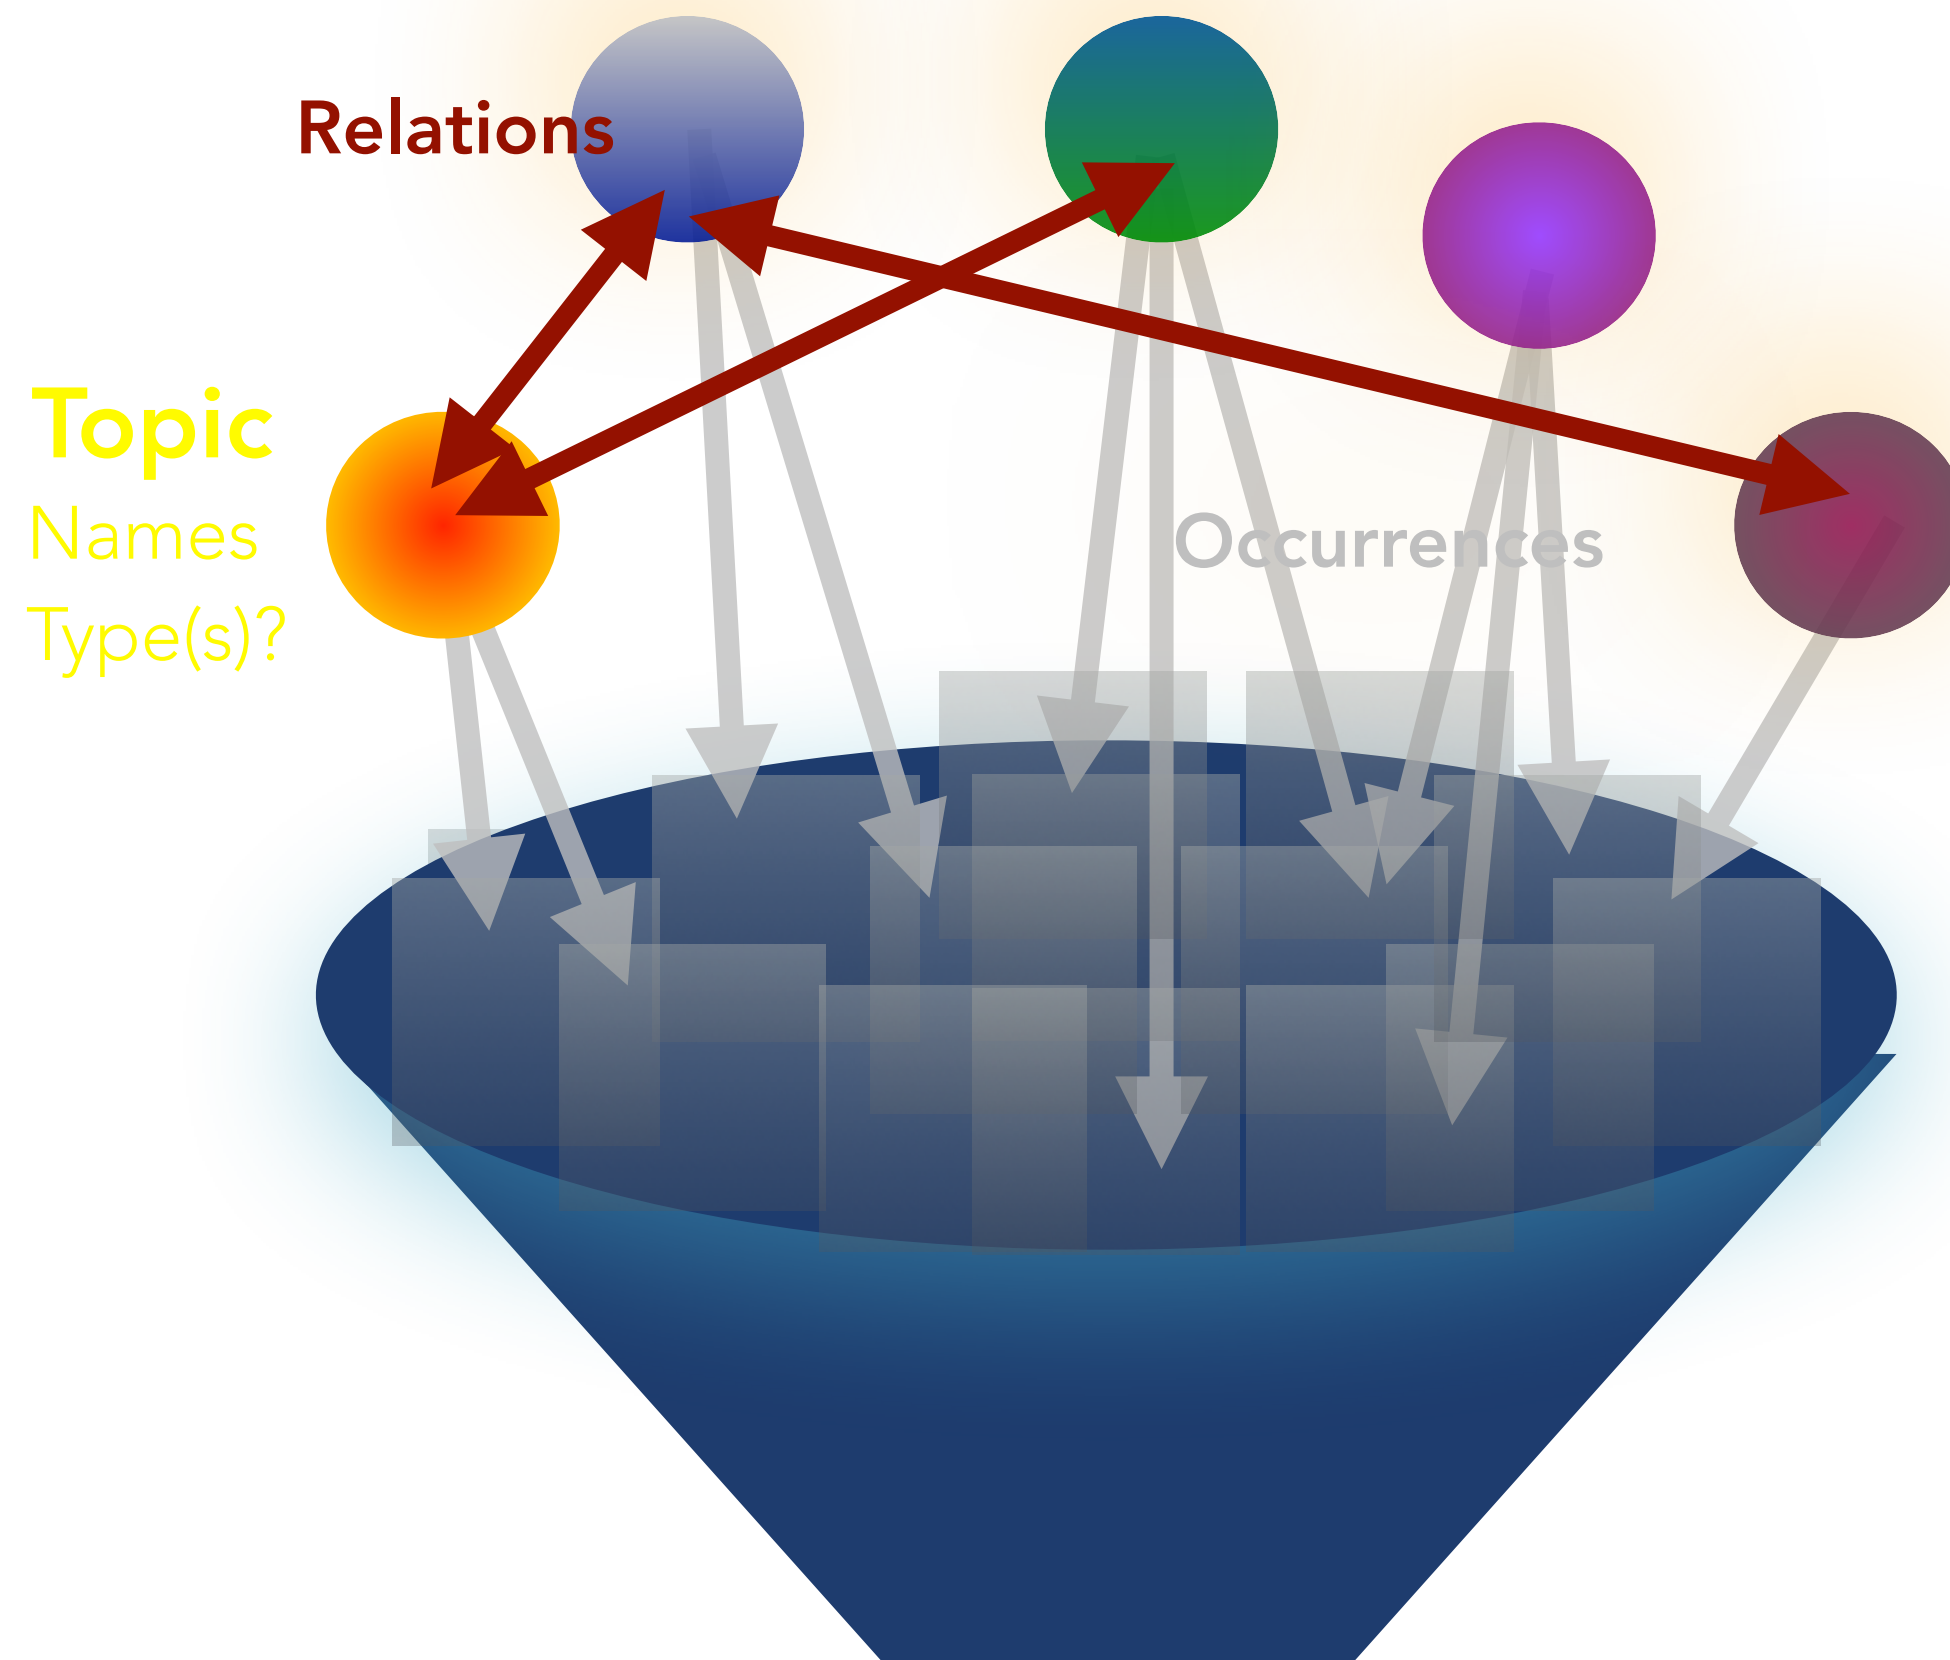

KNOWLEDGE GRAPH TEMPLATE

- Objects with predefined generic properties, ready for connectedness.
- Based on concepts inherited from topic maps: knowledge base as overlay, topics as nodes, scoped names, user-defined relation semantics, reified relationships.

KG++

- Blurring the difference between data and metadata.
- Transactions and Processes considered relationships.
- Reified Relationships (i.e., edges are nodes too).

THE NETWORKER PLATFORM

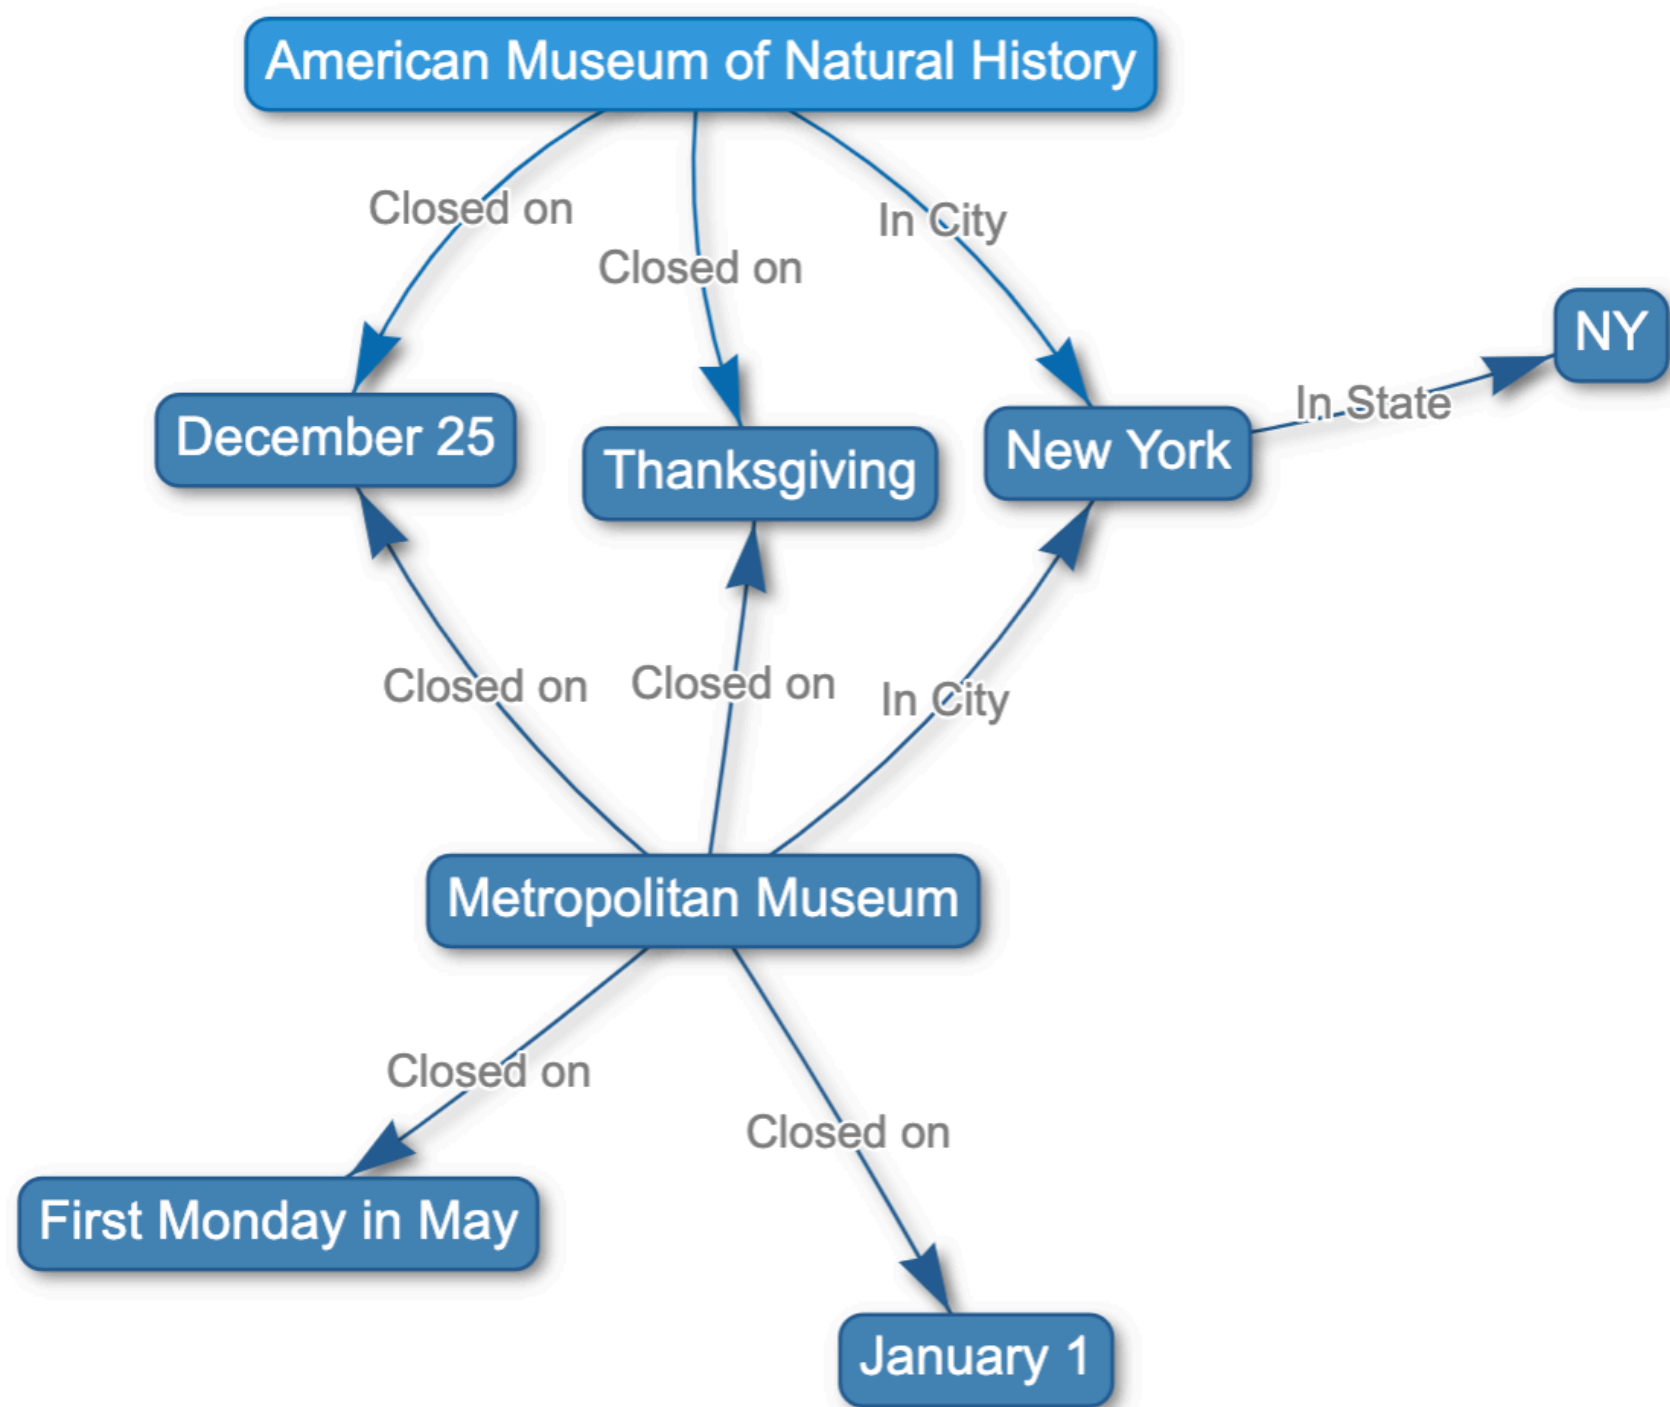

- Cloud-based.
- **Backend**: PostgreSQL + Django web framework, RESTful API.
- **Front end**: Independent from the backend. Current editorial interface in React (previous version in Angular).
- Customizable scripts for **import and export** of data using built-in API. Multiple formats: JSON, XML, RDF, Property Graphs, HTML, SQL, CSV, XLSX, etc.

OPTIMIZING TWO WORKFLOWS

- No learning curve required for Subject Matter Experts
- Easy, powerful and flexible for Programmers.

2	Metropolitan Museum	New York	NY	Thanksgiving, December 25, January 1, First Monday in May
3	American Museum of Natural History	New York	NY	Thanksgiving, Christmas
4				

```

1 from django.conf import settings
2 from otcore.management.utils import get_spreadsheet_data
3 from otcore.management.api import topic, relation, merge
4

```

```

5 def run():

```

```

6     filename = f'{settings.MEDIA_ROOT}museums.xlsx'

```

```

7     sheets = {

```

```

8         'Sheet1': {

```

```

9             'first_row': 2,

```

```

10            'last_column': 'D'

```

```

11        },

```

```

12    }

```

```

13    data_dict = get_spreadsheet_data(filename, sheets)

```

```

14    data = data_dict['Sheet1']

```

```

15    for row in data:

```

```

16        col = data[row]

```

```

17        relation(topic(col['A']), topic(col['B']), topic('In City'))

```

```

18        relation(topic(col['B']), topic(col['C']), topic('In State'))

```

```

19        days = [day.strip() for day in col['D'].split(',')]

```

```

20        for day in days:

```

```

21            relation(topic(col['A']), topic(day), topic('Closed on'))

```

```

22
23    merge(topic("Christmas"), topic("December 25"))

```

FEATURES

- Indexes
- Merge / Detach
- Create / Delete Topics
- Editing Relationships
- Taxonomies
- Reified Relationships
- Graph editing
- Shortcuts (Underline, minimal settings)
- Writing tool.
- Export HTML, JSON, XML, SKOS, Property Graph,
