

The Melting Pot of Information

Enabling Multiple Perspectives
including Auditing

Michel BIEZUNSKI

mb@infoloom.com

October 11, 2006.

Fifth Semantic Interoperability Conference, MITRE Conference Center

A wide-angle photograph of the New York City skyline across the water, featuring numerous skyscrapers and the Statue of Liberty. The sky is overcast with grey clouds.

Contents

- Semantic Interoperability vs. Multiple Perspectives
 - ▶ Contradictory Requirements
 - ▶ A solution: The Data Projection Model
- A use case: Auditing Information
 - Where do Topics come from in IRS Tax Map?

▶ Contradictory Requirements

- Information is a mess – and will always be!
 - ▶ We need to handle the mess, not deny it.
- We are all different – and will always be!
 - ▶ One format, one schema for all: forget it! There are many different things we want to do, and there are multiple ways in which we can view the information.
- Information comes from everywhere --and will always do.
 - ▶ We need information that can be trusted.
 - ▶ Especially from government sources...

A wide-angle photograph of the New York City skyline across a body of water. The Statue of Liberty is visible on the left, and the dense cluster of skyscrapers of Lower Manhattan extends to the right. A large ship is docked on the far right. The sky is overcast with grey clouds.

Proposed Solution

- Every information item is a step in a process.
- All processes can be expressed as a set of one-to-one relationships.
- This is the same idea which is at the core of RDF, Topic Maps and other graph-driven information models. Back to the core!
- From the elements, rebuild views with multiple perspectives.

Usages

- Integration of taxonomies, ontologies, emanating from various sources, various people, at various times.
- Creation of specific views for specific purposes: including maintenance, quality control, reporting, auditing

Whatever. Whenever

▶ E pluribus unum

- Provide a hospitable environment for items to coexist and connect with each other, even from different origins.
- Enable freedom of speech: various perspectives on the same information objects.
- Provide accountability, transparency, so that clear policies can be established.
- Sounds familiar?

Interoperability in Two Steps

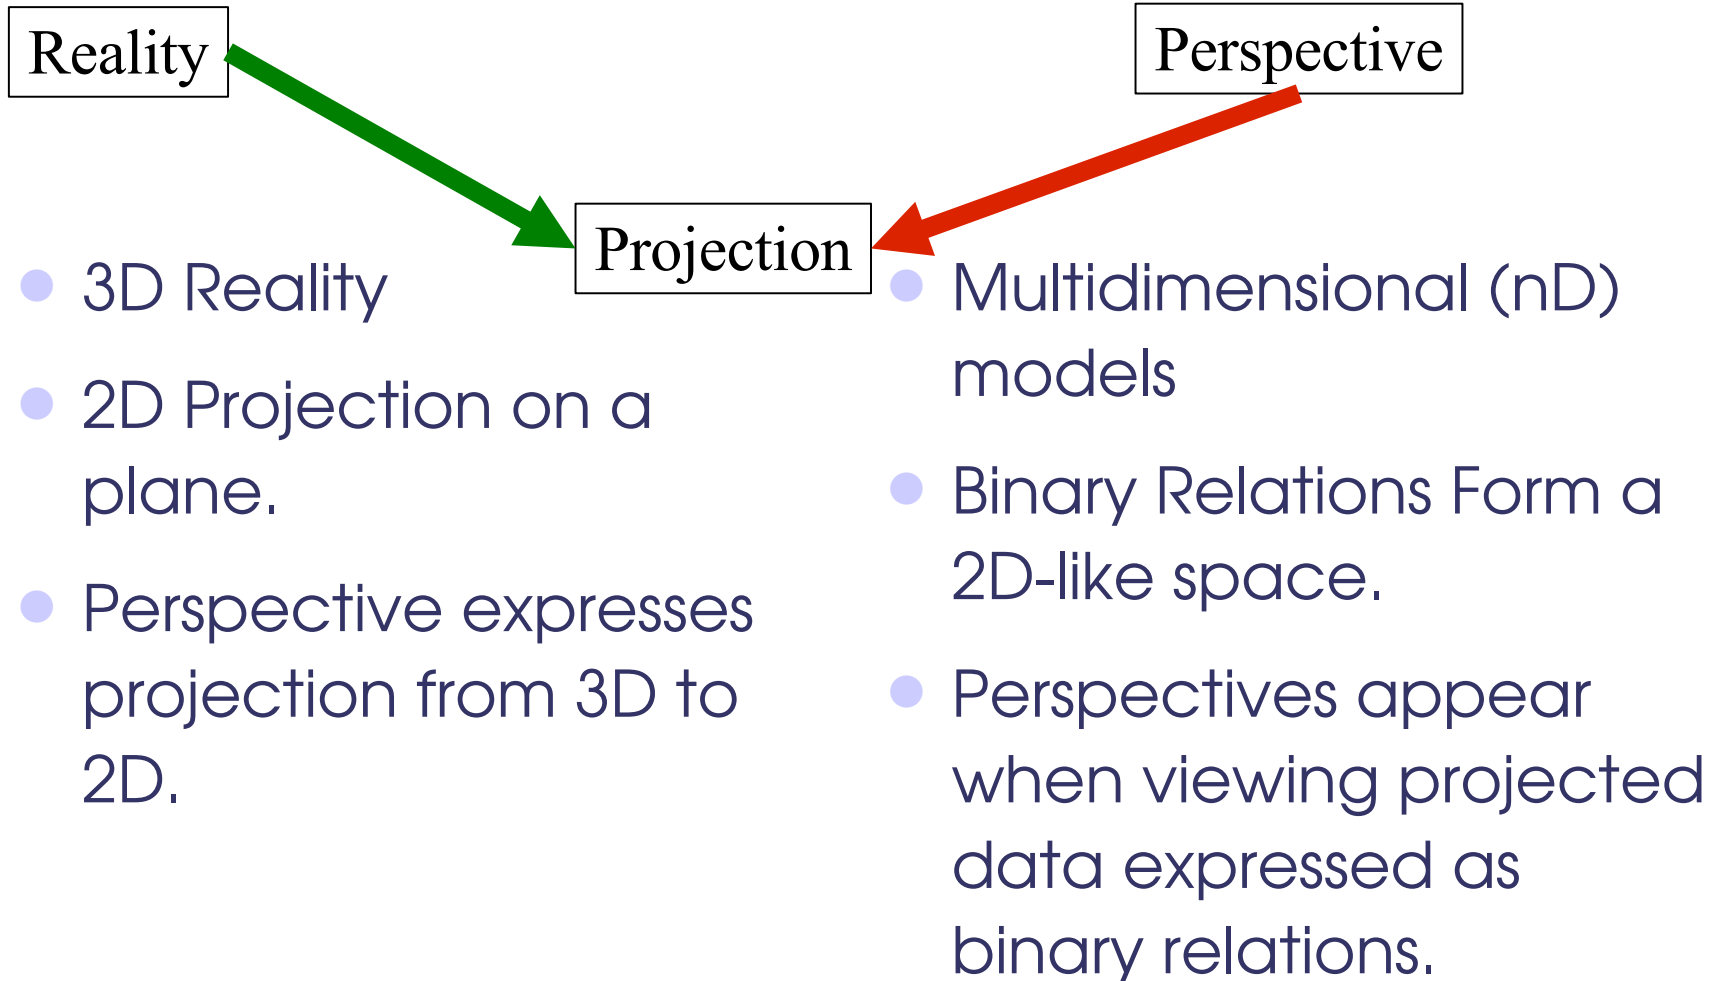

- **1st step:** decompose a system into its elementary processes expressed as binary relationships
Example : **< 2 | + | 3 >**
 - ▶ **PERSPECTOR :** **< x | o | y >**
x operand, operator, y operand
- **2nd step:** rebuild views integrating the components.
 - ▶ Each view conforms to a given perspective.
 - ▶ Multiple perspectives possible.

Perspective

- Perspective = methods to represent 3-dimensional space on a flat surface.
- Geometry: laws of perspective express what's invariant given various points of view.

Perspective and Projection

A wide-angle photograph of the New York City skyline across a body of water. The Statue of Liberty is visible on the left, and a large ship is on the right. The sky is overcast.

Auditable Information Systems

- Information systems can be made accountable the same way financial information is.
- Auditing Information = Viewing information within one given perspective.
 - ▶ Auditing is no more than one particular way of navigating information.

A wide-angle photograph of the New York City skyline across the water, featuring numerous skyscrapers and the Statue of Liberty. The sky is overcast with grey clouds.

IRS Tax Map

- Electronic Research Tool for assistors in call centers & taxpayers
 - ▶ Network navigational model (Topic Map)- Enables research by subject.
 - ▶ Easy to use. Doesn't require any change in the workflow.
 - ▶ Uses combination of automatic processes/manual input.
- Contains:
 - ▶ Forms/Instructions, Publications, Tax Law FAQ, Tele-Tax Topics
- Built on XML/SGML work.

● Topics that have three words in common get automatically related.

Applications

- Generalization
 - ▶ Record processes involved, expressed with a common notation.
 - ▶ Some processes are contained into standard applications: hierarchy in XML documents, taxonomies, relational databases, etc.
- Applicability:
 - Semantic Integration

A wide-angle photograph of the New York City skyline across a body of water. The skyline is filled with various skyscrapers, including the Empire State Building and the Statue of Liberty. The water in the foreground is dark and calm. The sky is overcast with grey clouds. A large blue triangle points to the left, partially obscuring the word 'More' in the title.
